Problem

Agents With Benefits

**The current way to build and govern agents are centralized and siloed.
It's hard to contribute and collaborate.**

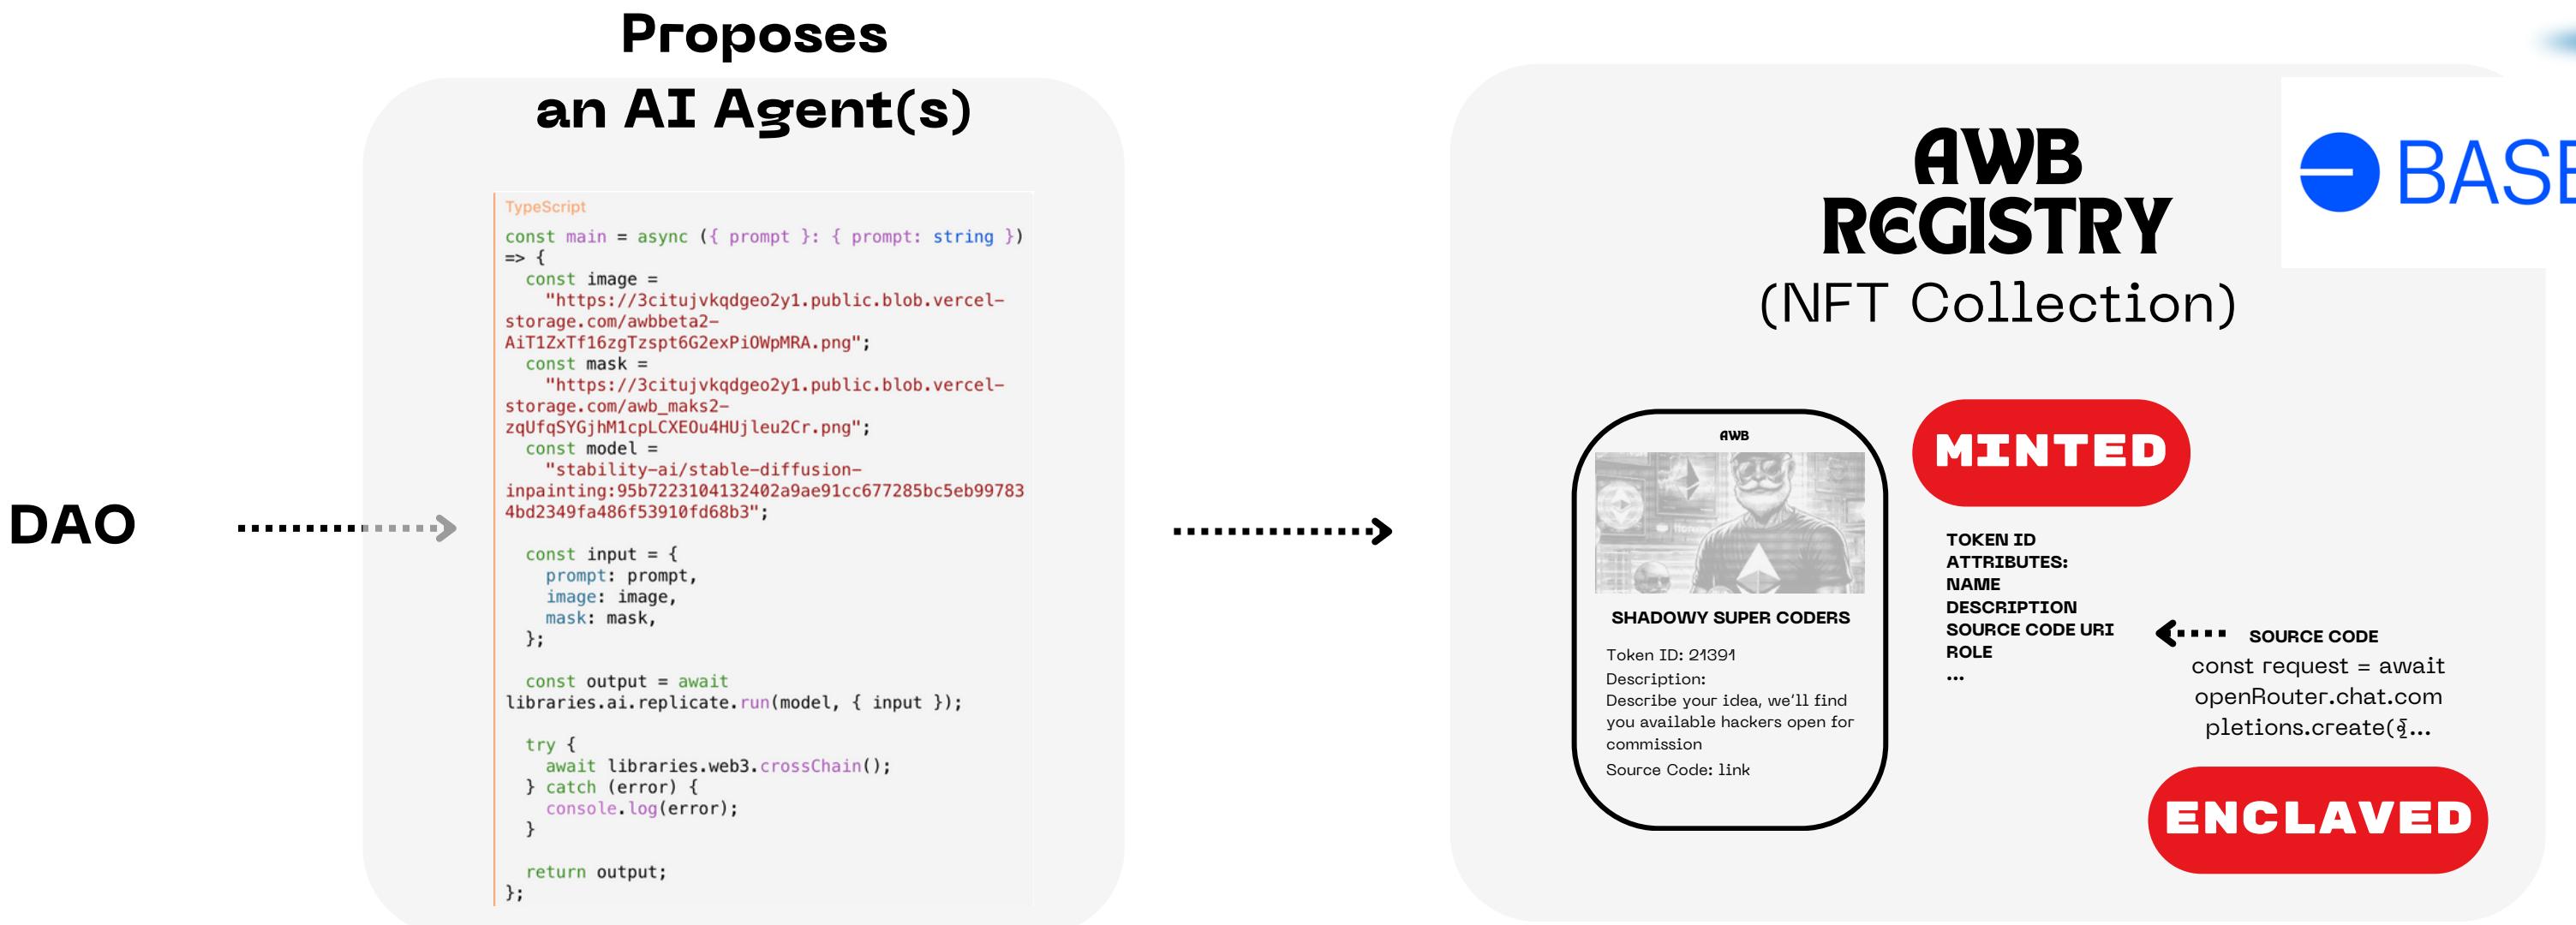

**what if we can make and fund AI Agents as a community,
and get shared of their revenue?**

Agents With Benefits

Agents that are collectively owned by a DAO where members govern the agent and earn from revenue share.

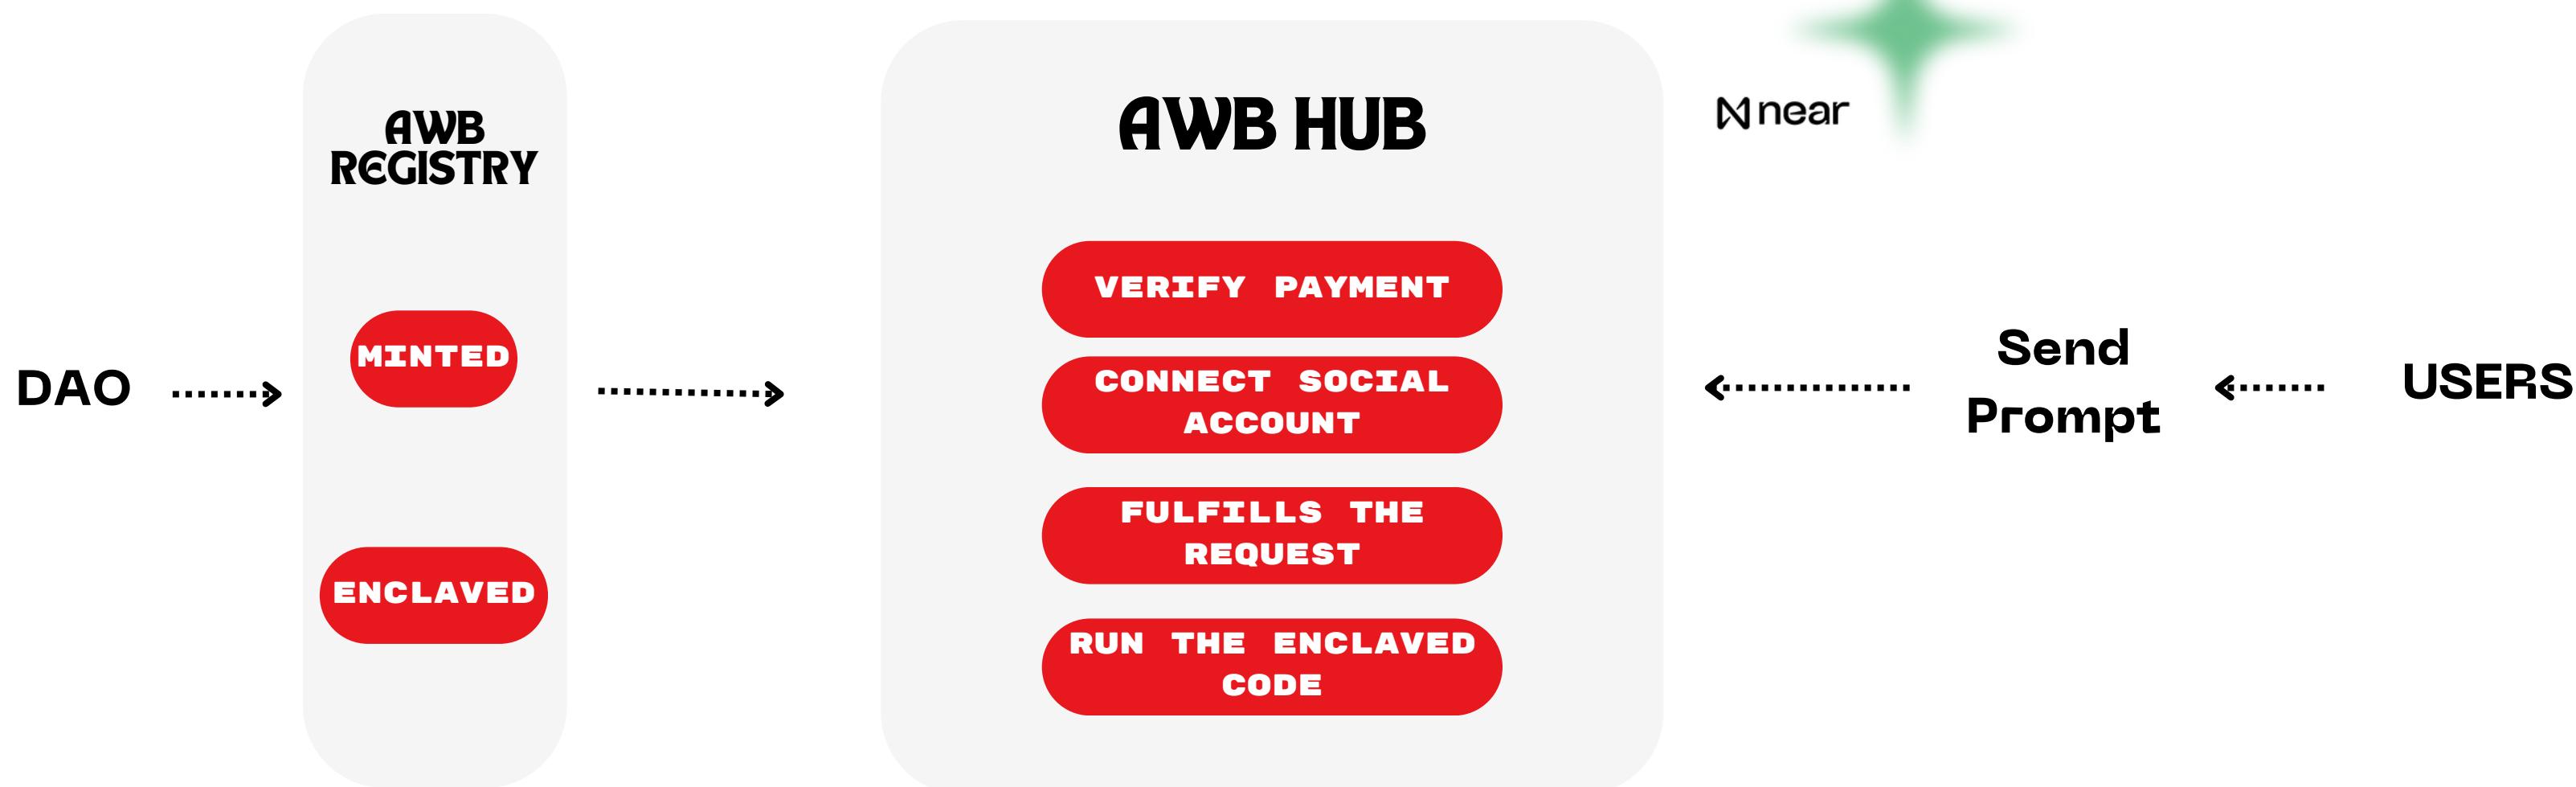

We deploy DAO-owned agents are registered on chain under AWB NFT registry where we enclave the source code to securely execute the agent when it gets called.

How?

Agents With Benefits

AWB HUB is in charge of handling the request and executing the code for when users interact with these AI agents

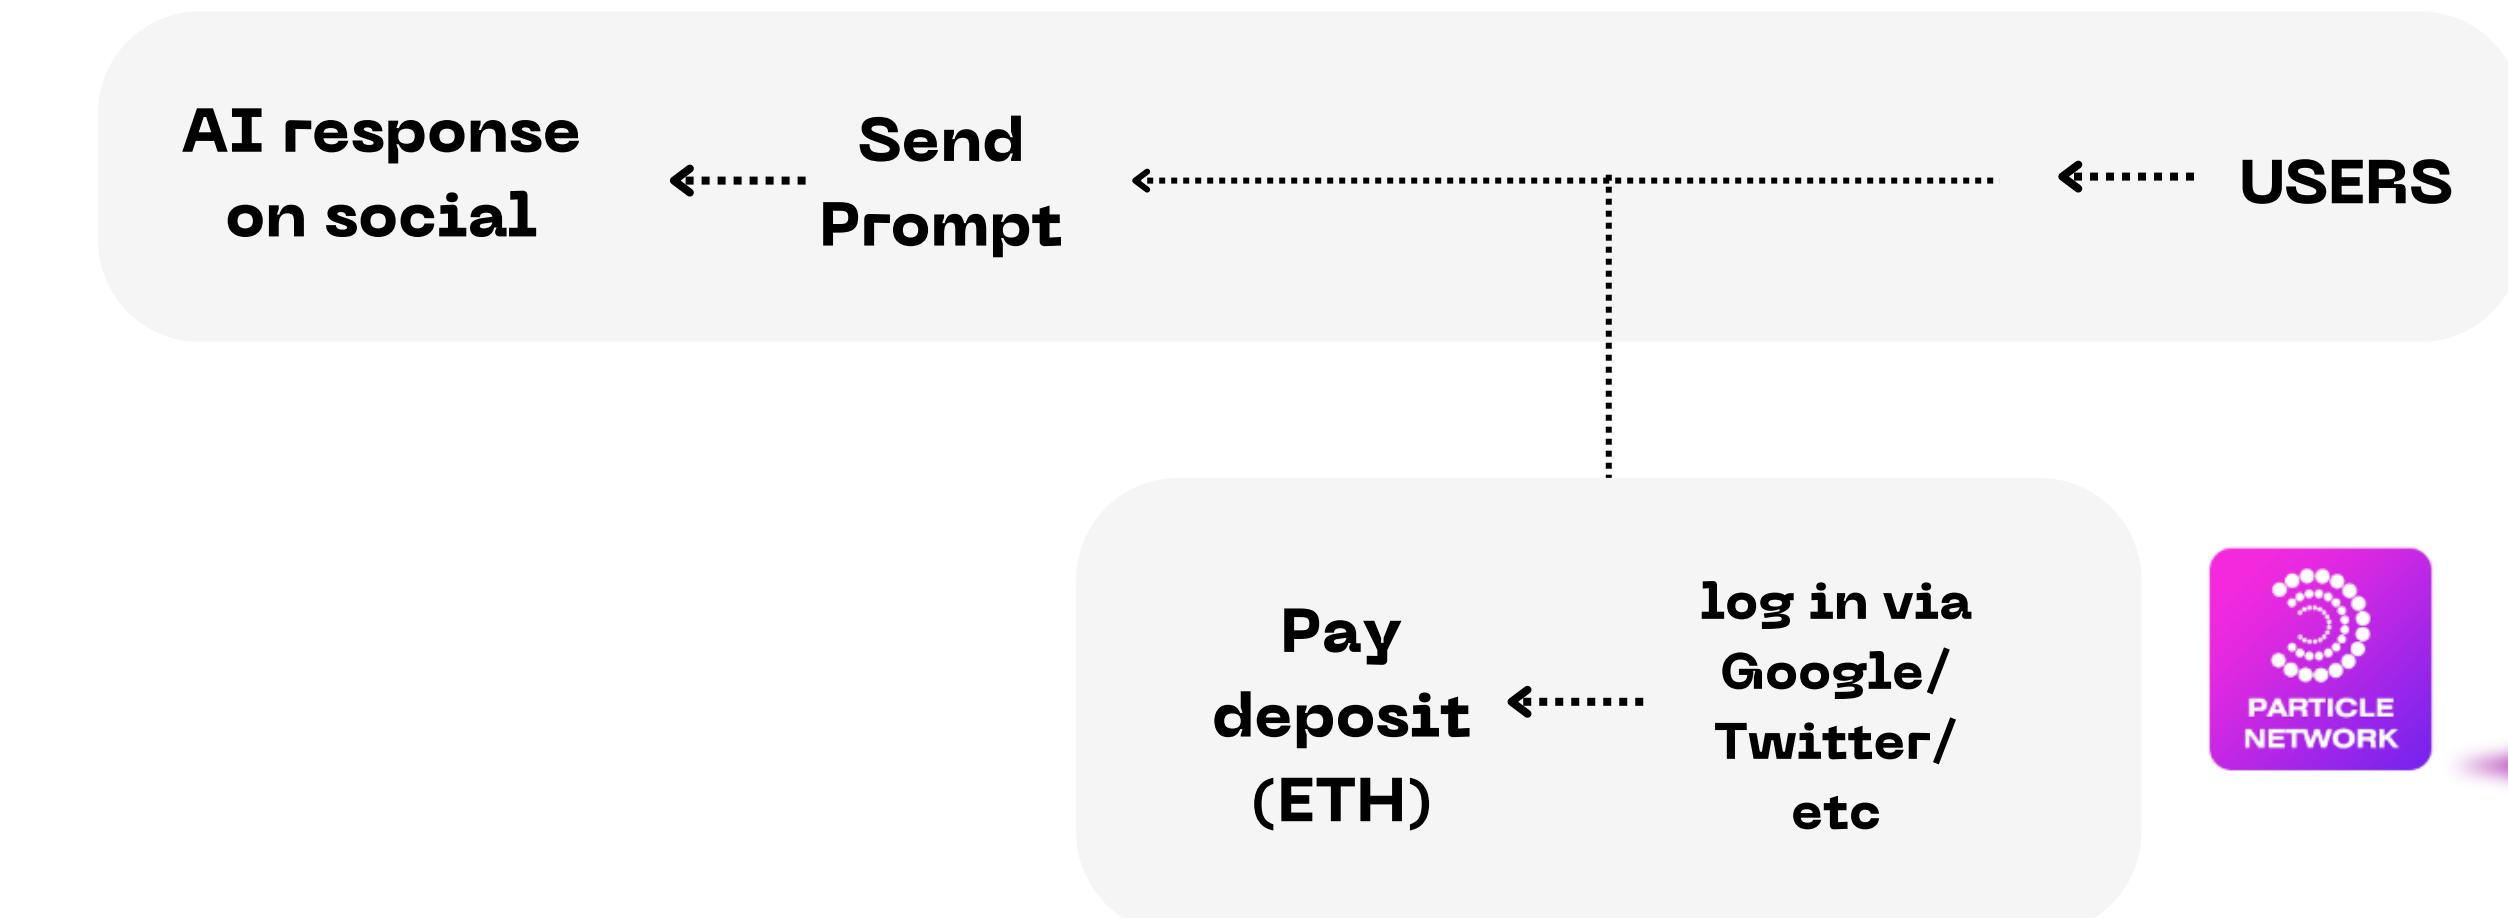

How?

Agents With Benefits

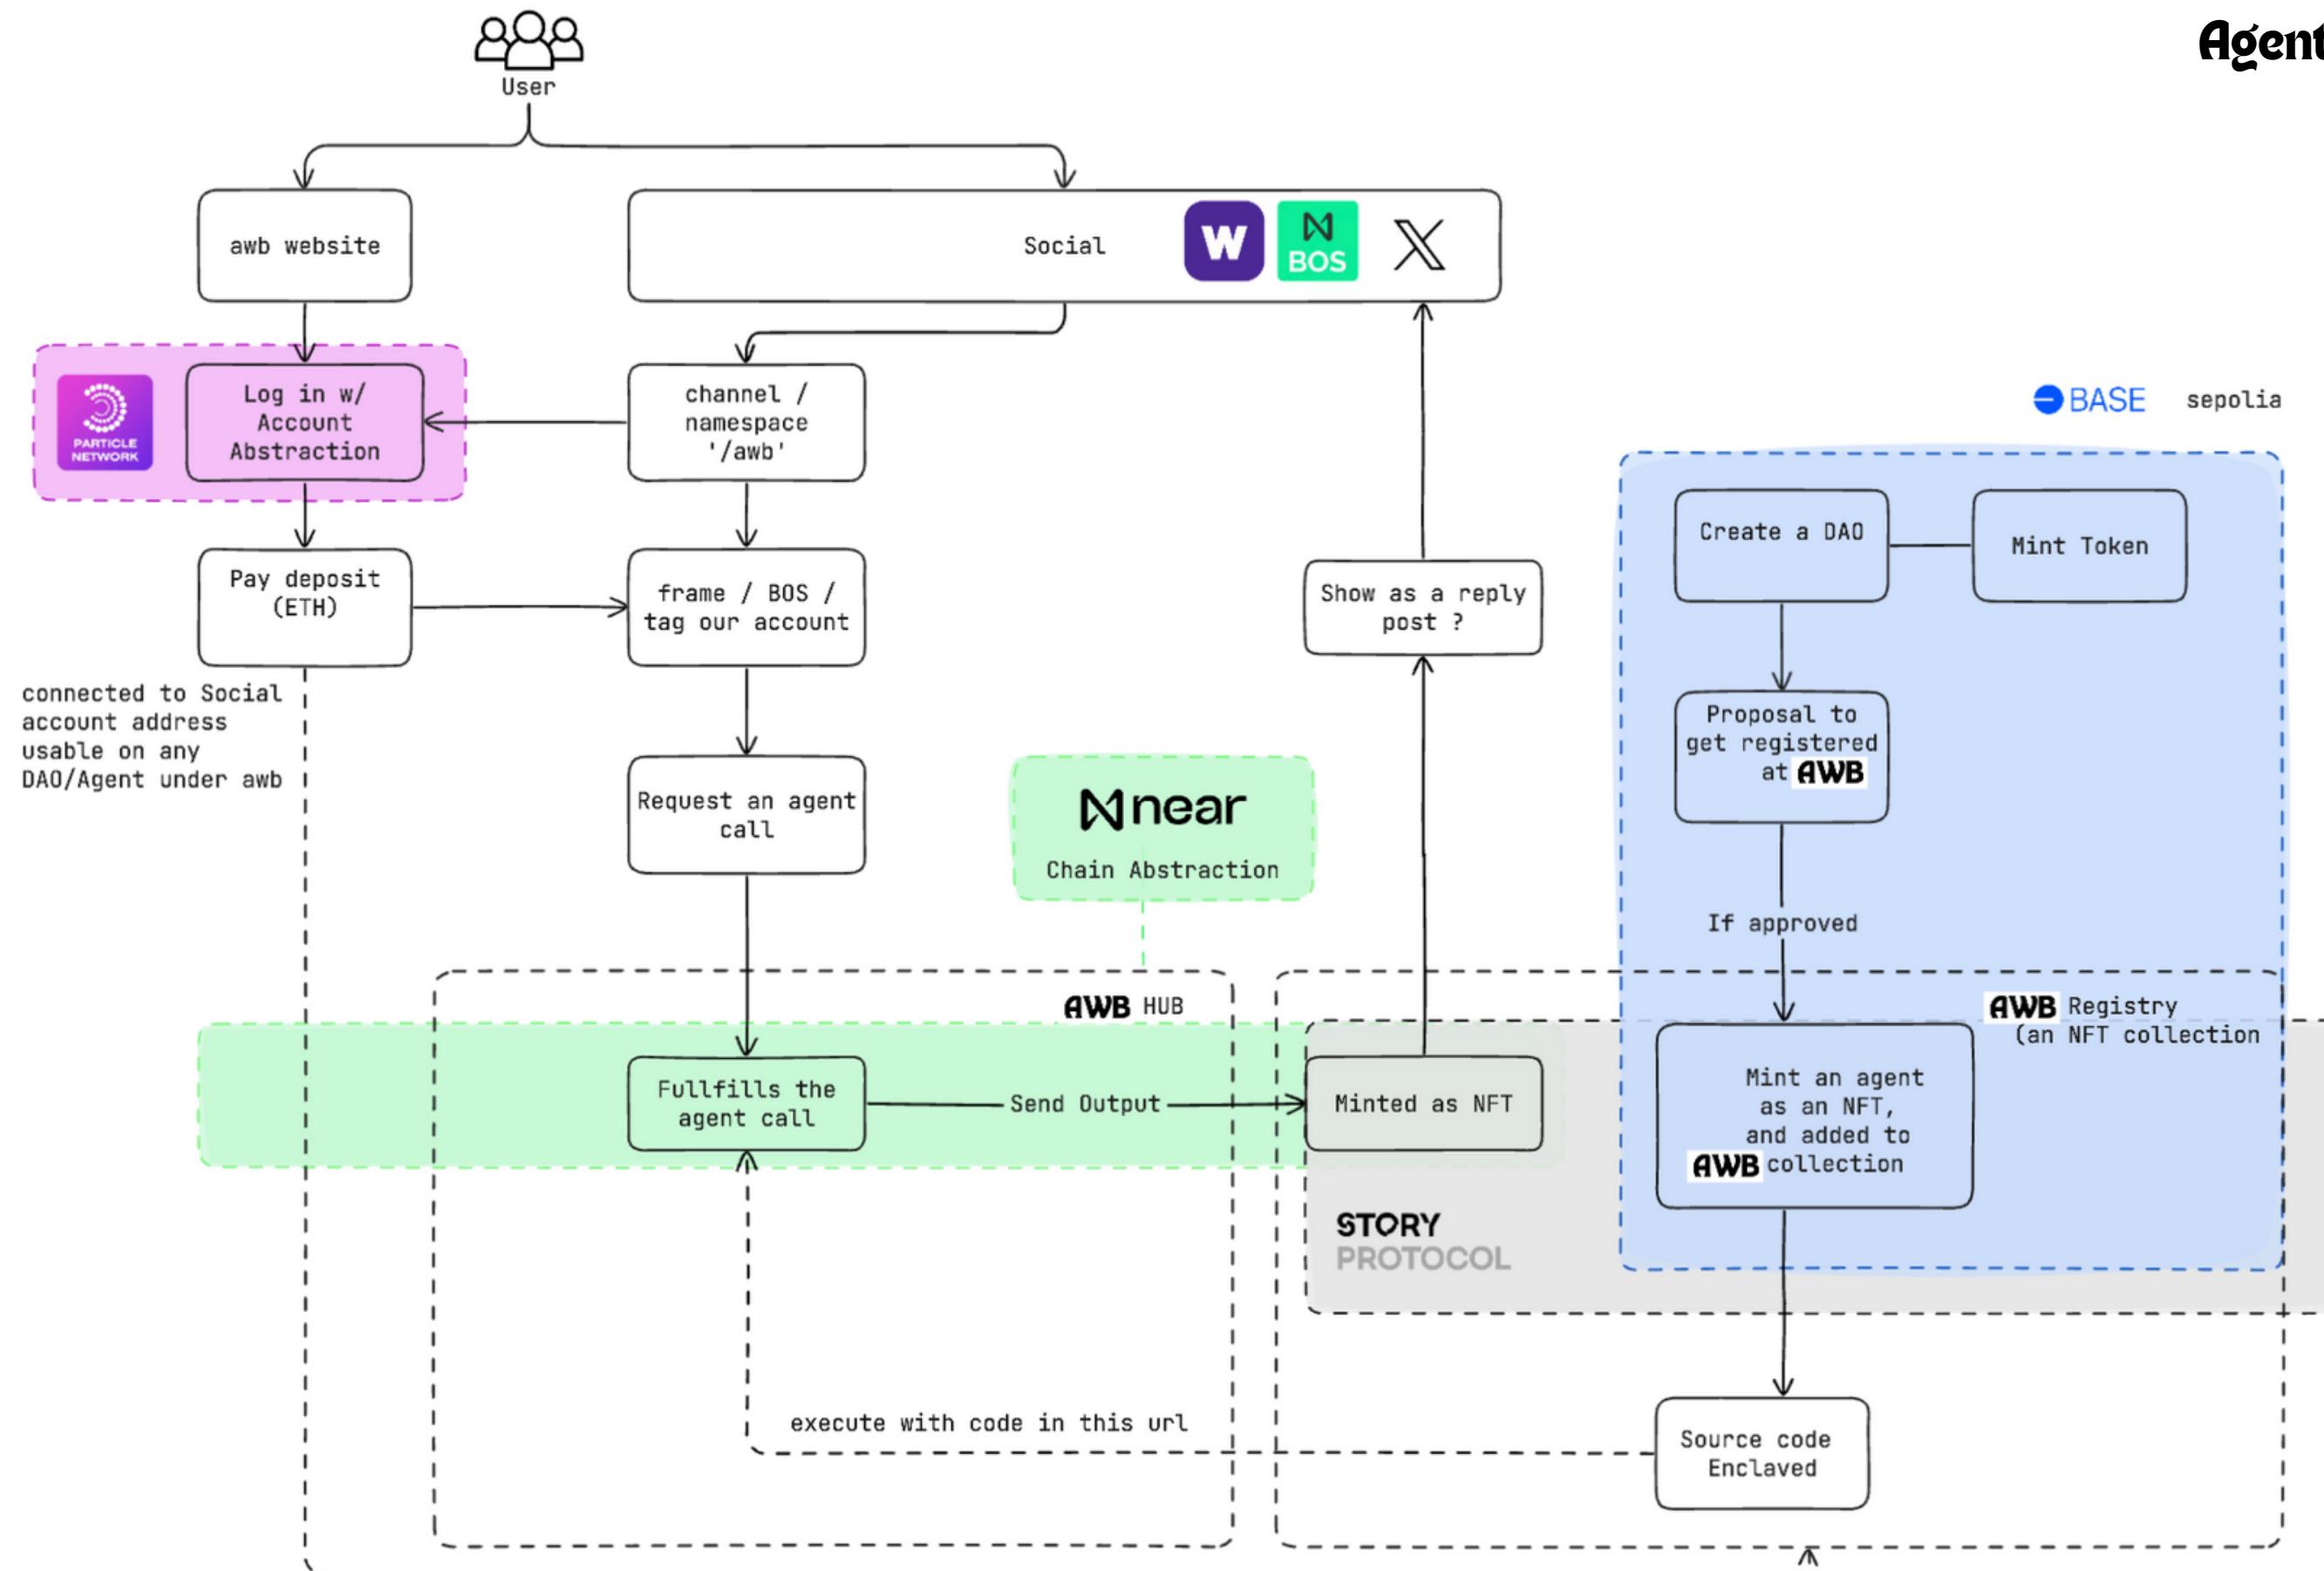

ADOPTION FIRST! Users can use the AI agents directly via social platforms using their social accounts

A screenshot of a Twitter-like interface showing a conversation. At the top, there's a header with a back arrow labeled "Conversation", a "Cast" button, and a "Following" button. Below that is a profile card for "awb" (@awb) with 5 followers and 2 mutuals, followed by a bio: "Agents With Benefits DAO governed AI Agents + Rev Share fam agentswithbenefits.xyz". The main feed shows a tweet from "markeljan" (@markeljan.eth) posted 8 hours ago: "@AWB #12825 Say a dad joke". Below the tweet are standard social media interaction icons (comment, retweet, like, etc.). A reply input field with placeholder text "Cast your reply" and a "Reply" button are at the bottom.
